Step By Step   Setting Up a Percon Series 10+

Steps to set up a Percon Series 10+ Decoder Box. The Percon Series 10+ comes preset from the factory with Predefined Default D2. This is defined for barcodes up to 10 digits in lengths. To reset the factory Default scan the D2 barcode. To set the box for longer barcodes, follow the steps below:

Scan the following barcodes, they can be found in your Percon Manual or on the bottom of the some units.

1. START

2. a sample of the shortest barcode (make sure the unit beeds)

3. a sample of the longest barcode (make sure the unit beeds)

4. E for End (the unit will beep once and the red LED should flash)

5. E for Save (the unit will beep 5 times and the green LED should be lit)

The Percon should now read barcodes that are longer then 10 digits, like the Smart Receipt.
