

Zebex Z-1070 & Z-1071

Portable Data Terminal User Manual

OVERVIEW

Installing and charging battery

Figure 2: Inserting Batteries

Press the battery cover lock to remove the cover.

Insert batteries according to the orientation in the picture

Replace the cover and lock it back.

Charging Batteries

Warning!

Use the Power Adapter with NiMH batteries ONLY! Connecting the Power Adapter with any other type of batteries in the PDC voids the warranty, ruins batteries, can burn up the Personal Data Collector, and could possibly cause harm to persons or property! You may use regular disposable alkaline cells to operate the PDC, but never mix NiMH with alkaline batteries, and never connect the Power Adapter when there are disposable (alkaline) batteries in the unit.

To charge NiMH batteries:

1. With NiMH rechargeable batteries (ONLY!) in the PDC unit, connect PDC with the Communication Cable.
2. Plug the Power Adapter connector into the socket on the side of the large end connector of the Communication Cable.
3. Plug the Power Adapter into an outlet. While charging, the LED on the PDC lights up red. The LED turns off when the batteries are fully charged. Charging takes 3 to 5 hours.

Figure 3: Connecting the Power Adapter

It is normal that the Power Adapter and the NiMH battery cells become warm during charging.

Note:

If needed, when NiMH batteries are low, the PDC may be operated with the Power Adapter connected. Never use the Power Adapter with other types of batteries inside the PDC unit!

Store Data

1. On the Memory Screen Press **SCAN**

2. Press **SCAN** again to select (1.Run Task).

3. Press **SCAN** to select "1.READ"

4. Press and Hold **SCAN** to scan barcode
