

M6000 Series

Cordless Bar Code Scanning Systems

AML M6000 Series cordless bar code scanning systems bring users the freedom to scan-and-roam up to 150 feet away from the base station, without the high cost of integrated RF scanners. Many users can retain and use existing undecoded, corded laser, CCD or wand scanners for additional savings. AML cordless scanning systems offer an affordable solution to users wishing to eliminate the cost and safety risks associated with extension cables.

Each M6000 Series cordless bar code scanning system consists of a base station (M6200 or M6300) and an M6000 portable decoder. An undecoded laser, wand, or CCD scanner is connected to the M6000, allowing the user to scan bar codes and roam up to 150 feet (unobstructed line-of-sight) away from the M6200/M6300 base station. The M6000 transmits the scanned bar code data to the base station using a radio frequency (RF) link, where the data is converted into useable IBM compatible PC keyboard data.

Each M6200/M6300 base station also features a bar code scanner interface, allowing it to function locally as a decoder for laser, CCD, or wand scanners, in addition to its normal function of receiving and converting wireless data. Each M6200/M6300 can be custom configured to allow up to ten (10) M6000 portable decoders to be used with each base station.

The M6000 portable decoder is small, lightweight, and easily clips to a pocket opening, belt, or our optional holster. Once configured, simply connect a scanning device, push the button and you are ready to scan. A successful scan is confirmed with an audible beep. The M6000 automatically turns off power after an extended period of no use, so batteries are conserved and not accidentally discharged.

Reliability, ease-of-use and affordability make AML M6000 Series cordless bar code scanning systems an excellent choice for users who wish to add mobility to scanning applications. An ideal solution for data capture in retail stores, dry cleaners, shipping/receiving areas & much more.

- **Scan up to 150 feet from the host computer**
- **Expandable: Use up to ten M6000 portable decoders with one M6200/M6300 base station**
- **Supports most 5 volt undecoded laser, CCD or wand scanners**
- **Sleep mode conserves battery life**
- **Two year warranty**

AML Cordless Bar Code Scanning Systems provide an affordable way to add mobility to your scanning applications

M6000 Series

Cordless Bar Code Scanning Systems

Specifications:

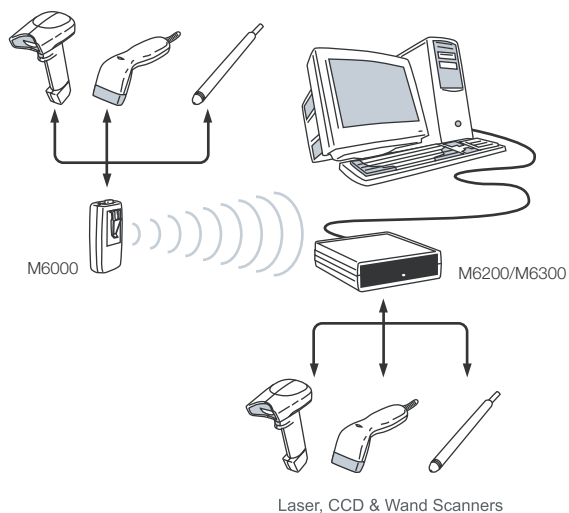

Input Device:	Undecoded, 5VDC, laser, CCD or wand scanner with 9-pin D-sub connector
Bar Codes:	The decoder automatically recognizes and reads the following bar code types: Code 39, Extended Code 39 (full ASCII), Interleaved 2 of 5, UPC-A, UPC-E, EAN-8, EAN-13. UPC and EAN supplements (2 and 5 character), Codabar, Code 128, Code 93, Code 11, MSI/Plessey.
Range:	Typical Range: 150 feet in an unobstructed line-of-sight environment.
Interface:	M6200 - 5-pin circular DIN connector (IBM PC/XT/AT), also includes PS/2 adapter. M6300 - USB port (HID)
Power:	M6000 - One 9 volt alkaline battery M6200/6300 - Receives power from the computer through interface cable
Physical:	M6000 - 5 1/8" L x 2 3/4" W x 1 1/2" H, 5 oz. (with battery) M6200 - 5 1/4" L x 5 1/8" W x 1 1/2" H, 14 oz.
Frequency:	916.5 MHZ., no license required. FCC approved.

Optional Accessories:

CAS-6000: Double slot holster with belt. Accommodates the M6000 portable decoder and scanning device.
