Cordless Scanners

Charge Packs

The charge pack for the cordless scanner includes a rechargeable Nickel Metal Hydride (NiMH) battery and an international charging circuit. When fully charged, the pack provides 18,000 scans, or about 25 hours of continuous use. The unique design of the charge pack allows it to plug directly into a two-prong wall outlet commonly used in North America.

For other parts of the world with different outlet receptacles, a charge pack adapter or a universal charge strip is needed. While the built-in charge circuit accepts up to 240 volts, the adapters and the universal charge strips provide the method to physically adapt to the various power plug and socket configurations.

Charge Pack Adapters

Charge pack adapters allow the charge pack to be plugged directly into many international outlet receptacles. After the charge pack is removed from the reader, just snap on an adapter and plug into an outlet.

When the adapter is used in 240 volt applications, only use charge pack CLESS/NIMH/S. Do not attempt to charge part numbers:
