

SecureTouch On-Time™

biometric time & attendance solution

SecureTouch On-Time is a biometric time clock that provides employers with a reliable, accurate time data collection system while offering employees a fast and easy means to record work hours.

Employees easily punch in and out by the touch of a finger. The state-of-the-art biometric technology instantly verifies their identity and eliminates the potential for buddy punching.

Designed for both small offices and high traffic environments, SecureTouch On-Time automates the clock in/out procedure and transfers all data to the payroll processing application via a secure interface to ensure accurate payroll calculations.

Overcome Common Payroll Problems

SecureTouch On-Time:

- Prevents costly buddy punching
- Eliminates the need for time sheets, employee badges and punch cards
- Automates complicated payroll calculation
- Improves employee productivity
- Reduces operating costs
- Can be integrated with most payroll processing applications
- Is flexible, scalable and expandable

SecureTouch On-Time™

biometric time & attendance solution

SecureTouch On-Time enables employers to create a custom time & attendance process that best suits their needs. The base device combined with the finger imaging module can completely eliminate the need for employee ID badges. Or, if use of employee ID badges is desired, the magnetic card reader or barcode scanner module can be added to quickly and accurately capture the badge information.

A large LCD screen displays the current time and date, as well as provides instant feedback to the employee that the clock in/out transaction was successful. The finger imaging module is ergonomically designed for optimal finger placement to help ensure fast and easy ID verification.

SecureTouch On-Time enables enrollment to take place at one central location or at each time clock, and grants access across the enterprise as desired. SecureTouch On-Time can also be configured as an attendance log for businesses with salaried employees.

Connect all employees with the HR and payroll departments across multiple locations with an automated, reliable and tamperproof time & attendance tracking solution: SecureTouch On-Time.

SecureTouch On-Time is powered by the SecureTouch Advanced Modular (STAm) device. STAm is a state-of-the-art terminal that enables a total customization of features by its modular design. Build your terminal with the precise functionality you desire for today, and easily add or subtract features in the future to meet tomorrow's needs.

The base device includes a high-functioning graphical display, keypad, magnetic card reader, multiple external ports, peripheral/memory card slots and Ethernet 10/100 connectivity. Optional features are available to add: biometrics, camera, barcode scanner, document imager, and printer.

STAm provides additional applications for:

- Credit/Debit Transaction Processing
- Payroll Check Cashing
- Pharmacy Controlled Substance Tracking & Physical Access Control
- *Future Application in Development: Age Verification*
