E-Sign law-compliant biometric signatures and software

encryption, compression, and authentication for eCommerce

Applications

- Bank/Credit Union signature enrollment and verification
- HIPAA applications, medical and hospital sign-in and consent
- Insurance enrollment, worksite monitoring

Description

The Topaz Model T-L755 is a complete and versatile pen-input system with interactive LCD display. The advantage of a Topaz LCD tablet is the ability to capture a digital signature with the ease and familiarity of ink-on-paper by use of "electronic ink" displayed under the pen tip as a user signs. The LCD can also be used to display text and graphics from the host computer and pen-tap "hot spots" allow users to navigate between multiple screens and forms, inputting information or checking preferred options. The large signing area and small size of the LCD 4x3 make it a great tool for capturing signatures in any environment where portability or space are at a premium. The active electromagnetic pen is designed for a long life of over 30 million tip activation cycles, is tethered to the tablet to prevent misplacement, and can be stored on the tablet when not in use. Should the plastic pen tip need replacement, it can be removed and a new tip installed without any dis-assembly required. Extensive software support is available at no extra charge and includes ActiveX, Java, Wintab drivers, and a shared C library for the capture, encryption, formatting, and secure processing of signatures. Topaz SigPlus™ software is compliant with eSign, state and federal digital signature regulations, by virtue of its ability to bind and encrypt the signature to a document or electronic form data. Examples and software plug-ins are bundled with the tablet.
